```
#include<stdio.h>
#include<stdlib.h>
int main()
{
   int RQ[100],i,n,TotalHeadMoment=0,initial,count=0;
   printf("Enter the number of Requests\n");
   scanf("%d",&n);
   printf("Enter the Requests sequence\n");
   for(i=0;i<n;i++)
    scanf("%d",&RQ[i]);
   printf("Enter initial head position\n");
   scanf("%d",&initial);

   // logic for sstf disk scheduling

      /* loop will execute until all process is completed*/
   while(count!=n)
   {
      int min=1000,d,index;
      for(i=0;i<n;i++)
      {
         d=abs(RQ[i]-initial);
         if(min>d)
         {
            min=d;
            index=i;
         }

      }
      TotalHeadMoment=TotalHeadMoment+min;
      initial=RQ[index];
```

```
    // 1000 is for max
    // you can use any number
    RQ[index]=1000;
    count++;
  }

  printf("Total head movement is %d",TotalHeadMoment);
  return 0;
}
```
